- SCTX6A very low stand-by current
- Auto power-OFF function for SCTX6A
- Few external components needed
- SCR6XA built-in 3.6v zener
- 7-function remote controller controlling Forward/ Backward/ Turbo/ Right-turn/ Left turn/ two function keys

#### General Description

The SCTX6A/RX6A are a pair of CMOS LSIs designed for remote controlled car applications. The SCR6A/RX6A have seven control keys controlling the motions ( i.e. forward, backward, rightward, leftward, two function keys, and the turbo function ) of the remote controlled car. SCTX6A/RX6A have Forward ( Backward ) combined with the turbo application. During normal operation without Turbo, Forward ( Backward ) output from SCR6A sends a 60 Hz signal. When Forward ( Backward ) and Turbo are both in effect, the output signal becomes completely high. This function is depicted as below.

Input condition	O/P Condition		
	Forward	Backward	Turbo
Forward	 =60Hz	Low	Low
Backward	Low	 =60Hz	Low
Forward +turbo	 =high	Low	 = high
Backward +turbo	Low	 = high	 = high

An Auto Shut-Off mechanism is built-in according to Toy Safety Requirement and effective during over-current situation in motor driver. The active high input applying to this Auto Shut-Off pin will turn off the motor. (VT pin, when unused, has to be connected to ground. The transfer point = 1.4V)

#### Absolute Maximum Ratings

- DC Supply Voltage-----0.3V to 5.0V
- Input/Output Voltage-----GND -0.2V to VDD+0.2V
- Operating temperature----- -10°C to 60°C
- Storage Temperature----- -25°C to 125°C

Comment\*

Never allow a stress the values listed under "Absolute Maximum Ratings", otherwise the device would suffer from a permanent damage. Nor is a stress at the listed value be allowed persist over a period, since an extended exposure to the absolute maximum rating condition may also affect the reliability of the device, if not causing a damage thereof.
